

Press release

QF-Test – now also for cleaning windows

Geretsried (10th of February 2020)

A milestone for the quality of Windows UIs: QF-Test (the tool for professional test automation) now also for native Windows applications.

QF-Test 5.0 is a major step forward - not just with its new look and support for native Windows applications, but also with other enhancements that make automated testing more convenient and reliable.

After an intense period of optimizing and fine tuning the many details of Windows GUI specific challenges, the new testing functionality “now really feels as a natural part of QF-Test” as Greg, QFS founder and technical lead, recently stated.

Long established in the area of Java and Web, QF-Test now has another component for the automated testing of desktop applications on Windows systems:

- classical Win32 applications
- .NET applications (WPF, Windows Forms)
- Universal Windows Platform (UWP) applications (XAML)

Java 14 applications are now also supported and complement QF-Test for hybrid systems with embedded browser components (JavaFX WebView, JXBrowser, SWT browser, electron applications ...) or PDF documents (textual and graphic checks for individual elements).

Important for existing customers: For licenses with four GUI technologies (Swing, Web, JavaFX, Eclipse / SWT), the upgrade to this fifth Win engine is free of charge.

Quality First Software and its tool QF-Test (www.qfs.de)

QFS (Quality First Software GmbH) is a German tool manufacturer from the south of Munich dedicated to quality assurance. With its product QF-Test QFS is firmly established since 2001 in the market of GUI test automation. QF-Test started as a professional tool for testing applications for Java Swing interfaces. Today QF-Test also covers cross-browser web testing, JavaFX the successor of Swing, PDFs and Eclipse/SWT/RCT applications – all cross platform. Mobile devices are further development goals.

More than 1,500 customers in over 50 countries trust in QF-Test over all sectors and company sizes as well as academic and public institutions. They appreciate the easy approachability of the product for testers and developers, its stability and the fast and competent support in several languages.
