Pressrelease

Testing of Web - now also supported for PrimeFaces, ZK and RAP 2

Geretsried (Mai 23rd, 2013)

Quality Assurance for web user interfaces is becoming increasingly difficult as test automation tools are able to deal with the growing complexity of AJAX tool kits only to a limited extent.

The established GUI test tool QF-Test is using its own solution and the current version 3.5.1 includes support for PrimeFaces, ZK and RAP version 2.

QF-Test reduces the complex structures implemented by tool kits to generic components. Standard elements of a GUI like trees, tables or lists will be addressed as such with the technical details abstracted away. This simplifies quality assurance for both user groups of QF-Test - developers as testers - enormously. Neither are developers required to adapt each element (cell, tree node and so on) nor do testers need to familiarize themselves with the details of each toolkit.

The well-known AJAX tool kits already supported by earlier QF-Test versions include Ext JS, Vaadin and RichFaces.

Quality First Software and the tool QF-Test (www.qfs.de)

Quality First Software GmbH (QFS) is a German software development company focusing on quality assurance. It provides the tool QF-Test for test automation of applications with a Java for Web-GUI. More than 800 customers in about 50 countries trust in their professional tool which is featured as cross browser, cross platform and user-friendly.

QF-Test supports the following technologies: Swing, SWT, Eclipse Plug-Ins, RCP, ULC, Java Applets, Java Web Start, HTML, AJAX, GWT, RAP, Qooxdoo, Richfaces and AJAX. Version 3.5.1 also supports Firefox 22 and Eclipse/SWT 4.3 "Kepler".
